**Repeated Dose Oral Toxicity 7-Day Gavage Study in Rats**

WORK REQUEST: 17473  
SERVICE CODE: 1654  
HASKELL NUMBER: 28307  
DUPONT REPORT NUMBER: 24116  
TESTING SOP NUMBER: DC005-T-001  
STUDY START DATE: 11-October-07  
STUDY END DATE: 12-December-07  
NOTEBOOK(s): E-111389-BF

STUDY DIRECTOR: Diane L. Nabb, Staff Toxicologist  
REPORT ISSUE DATE: February 14, 2008

OBJECTIVE

To evaluate potential subacute toxicity and kinetic behavior of the test substance when administered by oral gavage to male and female rats for 7 consecutive days.

STUDY DESIGN

Test Substance: HFPO Dimer Acid  
Lot/Batch Number: E112820-46MC  
Purity: 99% (doses were corrected for purity)  
Species: Rat  
Strain: CrI:CD(SD)  
Gender: Male and Female  
Age at start: ~6 weeks  
Group Size: Control 5 males, 5 females  
Low dose 8 males, 8 females (5/sex Main study, 3/sex Metabolism)  
Mid dose 5 males, 5 females (5/sex Main study)  
High dose 5 males, 5 females (5/sex Main study)  
Dose Levels: 0, 30, 100, 300 mg/kg Main study  
30 mg/kg for Metabolism animals  
Route: Oral gavage  
Dosing Volume: 10 mL/kg Main study and Metabolism animals

Dose Vehicle: Water  
Dosing Frequency: Daily  
Day 0-Day 6 Main study animals  
Day 0-Day 7 Metabolism animals  
Blood Sample Frequency: Day 7 Metabolism animals; predose, 0.25, 0.5, 1, 2, 4, 8, 12, 24,  
48, 72, 96, 120, 144, and 168 hours post dose via tail vein.

## PARAMETERS

Clinical signs, body weight, clinpath (SE=D7), necropsy, organ weight, P450s,  $\beta$ -oxidation, AUC.

## METHODS

### LC/MS Sample Analyses

#### A. Plasma Samples

The plasma samples were received and stored frozen prior to laboratory use. The samples were prepared for analysis by pipeting 150  $\mu\text{L}$  acetonitrile into a 1.7 mL microcentrifuge tube, and pipeting 50.0  $\mu\text{L}$  of plasma sample. The sample tubes were then vortexed for 1 minute and centrifuged at 14,000 RCF for 30 minutes. After centrifugation, 100  $\mu\text{L}$  of sample supernatant was placed into a HPLC vial and 400  $\mu\text{L}$  of HPLC grade water was added and mixed. As necessary, additional sample dilutions were performed using the 15% acetonitrile in HPLC grade water solvent to ensure that the sample responses were within the calibration curve.

#### B. Liver and Fat Samples

The liver and fat samples were received and stored frozen prior to laboratory use. The liver tissue samples were extracted in Acetonitrile with 4% perchloric acid while the fat samples were extracted in isopropyl alcohol. The calibration standards were prepared in the appropriate matched solvents.

##### 1. Fat and Liver Extract Preparation.

The fat and liver samples were preprocessed by chopping the tissue samples into small pieces and weighing (0.5 grams) into disposable 15-mL polypropylene centrifuge tubes. Five 5/32" ball bearings were added to each tube, and a pipet was used to add 5000  $\mu\text{L}$  of the appropriate extraction solvent. The tubes were sealed with parafilm, and inserted into a SPEX Certiprep Genogrinder and homogenized for 4 minutes at 1400 strokes/minute. After homogenization, the tubes were centrifuge at 4125 rpm for 20 min at room temperature. The extract supernatant was transferred into glass vials and frozen prior to further sample preparation.

##### 2. Fat and Liver Extract Analysis.

Approximately 100 mg of Envi-Carb graphitized carbon sorbent was placed into a 1.7-mL microcentrifuge tube. A pipet was used to add 50.0  $\mu\text{L}$  of glacial acetic acid directly to the sorbent. Next, a pipet was used to add 1000  $\mu\text{L}$  of sample extract into the centrifuge tube. The tubes were capped, vortexed briefly, and then centrifuged at 10,000 RCF for 10 minutes at room temperature. After centrifugation, a pipet was used to add 525  $\mu\text{L}$  of the 1.7-mL microcentrifuge tube supernatant into a new 1.7 mL microcentrifuge tube and 475  $\mu\text{L}$  of HPLC grade water and mixed. The samples were centrifuged at 10,000 RCF for 5 minutes at room temperature, and supernatant transferred into HPLC vials for analysis. As necessary, additional sample dilutions were performed using the matched solvent to ensure that the sample responses were within the calibration curve.

The prepared samples were analyzed by LC/MS using the following parameters:

HPLC Instrument: Agilent Model 1200  
MS Instrument: Applied Biosystems API 4000

*LC Parameters:*

Column: Zorbax RX-C8, 150 x 2.1 mm, 5 µm particle size  
Mobile Phase: A: 0.15% acetic acid and 0.15% triethyl amine in HPLC grade water  
B: 0.15% acetic acid and 0.15% triethyl amine in acetonitrile

Column Temperature: 35°C  
Injection Volume: 10 µL

*MS Parameters:*

Ion Source: Turbo Spray, Negative Ion  
Temperature (TEM): 450  
Dwell: 300 msec  
Curtain Gas Flow (CUR): 50.0  
GS1: 11  
GS2: 70  
IonSpray (IS) Voltage: -4500  
CAD: 10.0  
EP: -10.0  
Quadrupole Resolution: Quad. 1: Unit  
Quad. 3: Unit

## RESULTS

The individual plasma sample results are provided in Appendix A

The individual liver sample results are provided in Appendix B

The individual fat sample results are provided in Appendix C

The summary and individual clinical pathology results are provided in Appendix D

The summary and individual pathology results are provided in Appendix E

The individual mechanistic evaluation results are provided in Appendix F

Comment:	Bold indicates statistically significant. The percentage indicates percent of control group mean of those parameters that were statistically significant. Statistically significant decreases in some red cell mass parameters were observed in male and female rats at the highest dose tested (300 mg/kg/day). A statistically significant increase in red cell distribution width was also present in 300 mg/kg/day females.

Comment:	Bold indicates statistically significant. The percentage indicates percent of control group mean of those parameters that were statistically significant. Decreases in serum lipids (triglycerides and/or cholesterol) were present in all dosed male groups. Other changes in clinical chemistry parameters occurred at 30 and/or 300 mg/kg/day and included increased ALKP and BUN, and decreased bilirubin, creatinine, total protein, globulin and calcium.

Comment:	Increased liver weight parameters were present in males at all dose levels and in females in the 300 mg/kg/day group. Increased kidney weights were also present in all male dose groups.							

Dose (mg/kg/day)	0	30	100	300	0	30	100	300
Histopath	Male				Female			
Comment:	Microscopic findings were limited to hepatocellular hypertrophy in all treated male and female dose groups. Lesions were graded as mild in all male groups and as minimal in all female groups.							

Dose (mg/kg/day)	30	
Plasma PK	Male	Female
Clearance time (h):	24	4
Graph:		
Comment:	<p>Based on the experimental design, the pharmacokinetic graphs resulting from this class of chemicals makes traditional methods of half-life calculation inappropriate. In order to provide a basis for comparing these chemicals to each other, the clearance time of the analyte will be calculated instead. In traditional pharmacokinetics an analyte is considered to be completely cleared after 98.4% of the analyte is cleared from the plasma.</p> <p>96- and 120-hour female plasma concentrations were below LOQ. The LOQ is approximately 20 ng/mL.</p>

**Summary and Individual Animal Clinical Pathology Data**

## EXPLANATORY NOTES

### ABBREVIATIONS:

#### General:

Adeq - adequate  
CLOT or Clot - sample clotted  
Incr - increased  
Mod - moderate  
OK - sample condition OK for testing  
UTD - unable to determine  
- - not observed, no data  
. - not taken, not performed, not observed, or results not valid

#### Individual Hematology Values:

WB - whole blood condition  
RBC - red blood cell count  
HGB - hemoglobin  
HCT - hematocrit  
MCV - mean corpuscular (cell) volume  
MCH - mean corpuscular (cell) hemoglobin  
MCHC - mean corpuscular (cell) hemoglobin concentration  
RDW - red cell distribution width  
ARET - absolute reticulocyte count  
PLT - platelet count  
WBC - white blood cell count  
ANEU - absolute neutrophil (all forms)  
ALYM - absolute lymphocyte  
AMON - absolute monocyte  
AEOS - absolute eosinophil  
ABAS - absolute basophil  
ALUC - absolute large unstained cell  
NRBC - nucleated red blood cell count  
NC - not calculated or not calculable

#### Individual Red Blood Cell / White Blood Cell / Platelet Morphology Values:

ANIS - anisocytosis  
MIC - microcytes  
MAC - macrocytes  
POLY - polychromasia  
HYPO - hypochromasia  
ECHI - echinocytes  
ACAN - acanthocytes  
TARG - target cells  
RX - rouleaux  
HJB - Howell-Jolly body  
SM - smudge white blood cells  
TOX - toxic granulation  
DB - Döhle bodies  
VC - vacuolated cytoplasm  
BC - basophilic cytoplasm  
PCE - platelet clumps / estimate  
GP - giant platelets  
BP - bizarre platelets

#### Individual Clinical Chemistry Values:

HEM - hemolysis  
LIP - lipemia  
ICT - icterus  
AST - aspartate aminotransferase  
ALT - alanine aminotransferase  
SDH - sorbitol dehydrogenase  
ALKP - alkaline phosphatase  
BILI - total bilirubin  
BUN - urea nitrogen  
CREA - creatinine  
CHOL - cholesterol  
TRIG - triglycerides  
GLUC - glucose

TP - total protein  
ALB - albumin  
GLOB - globulin  
CALC - calcium  
IPHS - inorganic phosphorous  
NA - sodium  
K - potassium  
CL - chloride

NOTES:

When individual animal data are not reported, it may be due to one of the following reasons or other reasons, all of which are explained in the study records:

the sample was clotted (CLOT)  
there was insufficient sample for testing (QNS)  
a valid result could not be obtained (RNV)  
the sample was not suitable for testing  
the animal died prior to sample collection  
no sample was available for testing (NSR)

Only positive findings were recorded for special observations (e.g., additional cell types) or observations marked other.

Groups with identical values may vary in statistical significance, because tabulated statistics are rounded to fewer decimal places than the values used for statistical determination.

Summary of Hematology Values for Male Rats
